## U.S. small cap growth: A big opportunity for long-term investors

Following sharp compression in earnings multiples year to date, U.S. small cap growth stocks are at their cheapest levels relative to large cap growth stocks since January 2001. Is now the time to reassess exposure to large cap growth in favor of small cap growth? We see reasons to consider U.S. small cap growth right now.

### A compelling valuation case

U.S. small cap growth stocks are priced at a substantial discount compared with U.S. large cap growth stocks, as measured by price-to-earnings ratio.

Total investment return at net asset value has been calculated assuming a purchase at net asset value at the beginning of the period and a sale at net asset value at the end of the period; and assumes reinvestment of dividends, capital gain distributions and return of capital distributions/allocations, if any, in accordance with the provisions of the dividend reinvestment plan. Net asset value equals total Fund assets net of Fund expenses such as operating costs and management fees. Total investment return at net asset value is not annualized for periods less than one year. Performance does not account for taxes. Returns for the other share classes vary due to different charges and expenses.

Voya Small Cap Growth Fund was launched on or about April 4, 2022 after Voya's acquisition of the investment advisory business of Tygh Capital Management (TCM) on January 1, 2022. In connection with this acquisition, the Board approved the reorganization of the TCM Small Cap Growth Fund with and into the Voya Small Cap Growth Fund. The historic performance provided prior to the launch date is that of the TCM Fund's I share. This performance information reflects applicable fee waivers/expense limitations, if any, during the period shown and absent such fee waivers/expense limitations performance would have been lower. Performance for other share classes would differ to the extent they have differences in their fees and expenses. As a result of the reorganization, the TCM Fund's shareholders received Class I shares of the Fund.

The **Russell 2000 Growth Index** is an unmanaged index that measures the performance of smaller U.S. companies with greater-than average growth orientation. The Index does not reflect fees, brokerage commissions, taxes or other expenses of investing. **Investors cannot directly invest in an index.**

The **Russell 1000 Growth Index** is an unmanaged index that measures the performance of the 1000 largest companies in the Russell 3000 Index with higher price-to-book ratios and higher forecasted growth values. The Index does not reflect fees, brokerage commissions, taxes or other expenses of investing. **Investors cannot directly invest in an index.**

The **Morningstar Rating™** for funds, or "star rating," is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar® Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three year rating for 36-59 months of total returns, 60% five year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. Rankings do not take sales loads into account.
